---

*3+ years of experience as a Software Developer, specializing in Frontend development with the React ecosystem and focused on digital product development. Adept at mitigating accessibility and performance issues that impact UX, with a strong emphasis on details that improve product quality.*

## EXPERIENCIA PROFESIONAL

---

### Freelancer

Front-end/Full-stack developer

Popayán, Colombia

July 2023–Current

- Participate in the development of the [La velada VI](#) website (hired by [midudev](#)), performing code reviews, bug fixes, accessibility and performance improvements.
- Improve data standardization in an app for real estate agents that implements AI and collaborate on the integration of a matching system like a "real estate Tinder".
- Collaborative development of a SAAS for generating images and renders for real estate using artificial intelligence.
- Correct and optimize different landing pages, improving their SEO, Lighthouse scores and their UX/UI.

### NTT DATA

Front-end developer

Popayán, Colombia

February 2022–March 2023

- Development of various web applications using React and Next.js, such as administrative dashboards, ERPs and internal applications, collaborating closely with UX/UI designers, testers and backend developers.
- Collaboration in the implementation and design of web platforms, contributing ideas and strategies to improve the user experience and enhancing the quality of the interfaces.
- Optimizing the performance of web applications by implementing best practices when fetching and consuming data in high-concurrency applications.
- Improving the accessibility of robust web platforms, enhancing keyboard navigation, readability, and usability.
- Analysis of requirements and translation into clear and detailed technical specifications to facilitate the subsequent development of each of the functionalities.

### SENA (Semillero de investigación)

Full-stack developer

Popayán, Colombia

August 2021–August 2022

- Collection and analysis of information for the drafting of functional and non-functional requirements, classifying them according to their priority for the MVP.
- Collaboration in the design of the app for both desktop and mobile, speeding up the delivery of the MVP by reclassifying priorities.
- Pixel-perfect implementation of the application design delivered in Figma.
- Consuming REST APIs to integrate a points-based rewards system, planning and designing gamification strategies for subsequent implementation.
